- Hook and loop waist adjustment
- Zipped ruler pocket on right leg
- Husqvarna tech-knee
- Zipped pocket on right leg
- Zipped pocket on left leg
- Straps for tick and snow protection
- Hooks for lace attachment

Business suit, Forestry version.

As a logger, you need to keep productive all day — and your clothes need to support that. Just like a professional athlete, you need to optimize your performance, and just like a businessman, you want to maximize your results.

For the business-minded athletes of the forest, Husqvarna offers four lines of protective clothes. It starts with the basic functionality of Classic and moves up to the high-end sophistication of Technical Extreme — our most agile and advanced forestry wear ever.

Each step up offers less weight, higher movability and smarter features. However, the protective performance is of the highest importance regardless of which product you choose.

The following pages will help you find the perfect business suit for your needs.
MATERIALS CHosen FOR YOUR ARENA.

To the user, comfort is in large parts a feeling. It’s our job to find out exactly how that feeling is created, how it can be improved, and what type of comfort is needed in each case. The materials used in Husqvarna protective clothes have all been either developed or hand-picked by us, and then put through many tests in the lab and in the forest to make sure they make the cut.
EXPECT MAXIMUM PROTECTION — NO MATTER PERFORMANCE LEVEL.

Each job comes with different requirements. Our range of protective clothing takes into consideration every type of work. In fact, our extensive range of safety clothing, offering the latest innovations in design and materials, will provide you with the level of protection and comfort you need to get the job done.
CLASSIC

Reliable, affordable and suitable for occasional chainsaw use. The protective performance provides you with confidence when working.

TIGHT FIT
FIND YOUR SIZE.

Depending on which model you buy, the clothes will fit differently on your body. The Classic and Functional lines have a regular fit, Technical has a tight fit, and Technical Extreme has a slim fit. Check your body measurements against the guide below to find your right size. We recommend you to always try the garment on to ensure the best fit.

Note! All measurements are body measurements, except the inner leg, which is a garment measurement. If a base layer is to be worn under the garment, it should also be worn when measuring. Chest: measured around the widest part of the chest. Height: from top to toe. Waist: measured around the waist. Inside leg: measured from crotch to desired length. All measurements are in centimeters.

1 *Available in Technical Waist Trousers.
2 *Available in Technical Carpenter Trousers.

Technical Waist Trousers are available with longer legs, and Technical Carpenter Trousers are available with shorter legs. In general, Husqvarna carpenter trousers have a wider fit than the waist trousers.
Your protective clothes are regularly exposed to sweat and oil. These substances can reach the protection layer, reducing its function. This is why you need to wash your clothes regularly and in accordance with their labeling. If your clothes get heavily soiled, you should wash them as soon as possible after use.

**CLEAN CLOTHES ARE SAFE CLOTHES.**

In addition to washing and cleaning your protective wear, you also need to check for heavily worn areas, damages and tears in the fabric. The protective functions may be seriously reduced if repairs are not carried out properly. Use the guide below for reference, and always consult your dealer if in doubt.

**WHOLE CLOTHES ARE SAFE CLOTHES.**

**WASHING GUIDE**

- Wash the garment regularly in accordance with the instructions on the inside labeling.
- Machine wash. For temperature, see inside labeling.
- After washing, the garment should be stretched prior to drying. Air dry slowly.
- Do not wash your protective clothes inside out. Also, do not bleach, dry clean, or tumble dry. Iron with low heat.
- Clean the garment immediately if it has been subjected to petrol, oil, grease or other flammable materials. Fire hazard!
- Keep the garment away from sharp objects, acids, oils, solvents, fuels and animal droppings.

**REPAIR GUIDE**

- If a repair to the outer material is being made, do not sew into the protective material since this can reduce the protective functions.
- Damaged outer material must be repaired immediately in order to prevent the protective material becoming damaged.
- The garment should be scrapped and not used again if the protective material has been damaged, incorrectly washed, or altered from its original shape.
- Adhesive must not be used when carrying out repairs as it may affect the protective material and reduce its protective qualities.
- This product is no substitute for the operation of a chainsaw and does not provide total protection.

Cut-retardant apparel and materials are subject to a certain degree of aging. In professional logging, the maximum period of usage is considered to be about 12 months. In non-professional or occasional use, up to 5 years is considered acceptable.
Felling trees is really just one part of a logger’s everyday challenges. To get to your workplace, you often have to tackle any number of obstacles. You climb, you jump, you stretch and twist as you make your way through brushwood and water, over rocks and slopes.

That’s where your protective wear needs to provide you with more than just safety. It needs to follow your every move. It needs to be as light as possible, adjust to the cold, the heat and your own body temperature.

And it needs to be comfortable, whatever you’re doing — and wherever you’re going.
