GARDENA

Water Controls

MADE IN GERMANY

Automatic irrigation - the water-saving solution that gives you more time to enjoy your garden.

For Beginners

- Manual Water Timer.
 - Water Control Flex.
- Innovative features such as optimum watering options for plant pots.

For Demanding Gardeners

- Water Control Select.
 - Water Control Multi Control.
- Flexible irrigation settings.

For Passionate Gardeners

Automatic irrigation of up to six garden areas one after the other when combined with a Water Distributor automatic.

All GARDENA Water Controls are backed by a 2 year warranty.

Intelligent irrigation solutions

A beautiful lawn

A beautiful lawn can be quite challenging: It needs regular cutting, some fertiliser every now and then, and sufficient water. This goes without saying. Because obviously a lawn will not be healthy if you do not look after it, which means that sprinklers and lawnmowers play a vital role when it comes to tending your lawn. Good irrigation is the elixir of life for the lawn in hot summers. However, this means one thing for you: watering, watering and more watering. Unless, that is, you treat yourself and your light-seeking, sun-seeking grass to an automatic irrigation solution. Both of you will reap the benefits: you and your lawn.

Conserving resources

Using water efficiently is not only great for the family coffers, but is particularly good for the environment. Therefore, it is worth taking a closer look at how we water our garden: When do I water it? How do I water it? Can I rely on rain or ground water? What changes can I make so that I can water my garden in a smarter way to reduce my water consumption? Using useful irrigation systems properly can help you to significantly reduce the amount of water you consume. Simply get your hands on whatever you need now to provide your garden with optimal irrigation solutions, and then make flexible changes to the system later should your needs change. Through the "Every Drop Counts" initiative, we are committing ourselves to saving water and to providing our gardens with sustainable solutions.

Healthy plants

If flowers could speak, they would ask for automatic irrigation. Hedges, vegetables or other plants would say the same. Why? Because semi-automatic or fully automatic irrigation systems allow for the individual watering of plants that does not waste water and always dispenses the right amount of water right when the plants need it, and we mean always, even if nobody is there. Plants will only become vibrant and strong if they are looked after by gardening enthusiasts. But clever watering also plays a key role here.

More time to relax

Automatic irrigation will free up time to sit back and enjoy your garden in summer: If the system is well-planned and installed, you can relax as the water flows. Simply choose what's best for you and your garden. You need to consider water requirements for your flowerbeds, vegetable beds, lawn, terrace plants and your balcony. It goes without saying that you can also combine various areas of your garden that need watering.

Convenient watering with Water Timers and Computers

GARDENA Watering Control takes care of watering automatically. Decide when and how often your plants are watered, then the Water Control takes care of watering in the garden. There is a suitable model available for every requirement.

GARDENA Watering Controls

You never have to worry about watering again. Modern irrigation control systems water your garden automatically while conserving your water supply.

The simple way to a garden that waters itself.

Connect your water computer directly to the tap and control the irrigation of your lawn with sprinklers. You can simply arrange for your flower beds, patio plants or hedge to be watered automatically. Whatever your needs, the GARDENA range offers the right solution for you. All watering computers are easy to use and adjustable.

Did you know?

GARDENA developed the world's first watering computer in 1985, which we have been continually developing ever since. Use the system to control mobile sprinklers, the Micro-Drip-System or the sprinkler system. If you connect a soil moisture or rain sensor to the innovative irrigation computer, the system only waters when necessary.

Flexible and Automatic Irrigation

A modern irrigation system turns the time spent watering into leisure time. Enjoy more freedom with Water Controls from GARDENA giving you a spectacular garden and finally the time to enjoy it.

Unique advantages

- Easy to adjust with intuitive push and turn principle
- Large display makes it easier to adjust settings
- Angled control unit for clearer visibility
- Weather-proof electronics
- Detachable control panel for conveniently setting and when working away from the tap.

Battery "Safe stop" technology

- The unique technology prevents watering when battery level is low.

Water Control Range

	<p>Ideal to use when filling up pools and ponds.</p> 	<p>Works with Micro-Drip-System and Outdoor Cooling Mist Set.</p> 	<p>Ideal for balconies, terraces and micro irrigation.</p>

	<p>3 individual schedules.</p> 	<p>6 watering schedules. Flexible settings. Works with 6 way distributor.</p> 	<p>Can irrigate two garden areas separately.</p> 
Article designation	Water Control Select	Water Control Master	Water Control MultiControl Duo
Article No.	1891-20	1892-20	1874-20
Short Description	Flexible programming options. Watering days freely selectable	Individual setting options of six independent schedules, intuitive operation with just one button	With on screen instructions, menu guidance and large LCD for highly individual programming options.

 *Did you know?*

Micro-Drip irrigation has numerous benefits:

Water is able to penetrate the soil with pinpoint accuracy and seep into the ground with ease. There will be no fluctuations in your water costs and you will save water. The result: your plants will be kept well maintained.

Greater efficiency on controlled irrigation

Soil Moisture Sensors decide whether your Irrigation Control should activate or whether watering is required. These devices sensor when the soil is moist enough and prevents automatic irrigation from activating. The sensors can be connected to all GARDENA Timers and Computers (except the Water Timer, Art. No.1169).

Soil Moisture Sensor (1188-20)

Did you know?

In the event of heavy rainfall and when the ground has sufficient water, the Moisture Sensors will interrupt any scheduled irrigation. These water saving devices prevents over watering of plants.

6 Way Water Distributor

1197-20

Automatic irrigation up to 6 areas - in a row

The Water Distributor has 6 outlets for setting irrigation in 6 different areas. Can be used in conjunction the GARDENA Water Control Master (1892-20) for automatic irrigation. Ideal for individual plants and garden areas with varying water requirements. Non-required outlets can be easily deactivated.

Works in conjunction
with Water Control Master
1892-20

Can be wall mounted

Non-required outlets can be deactivated using the lever.

Irrigate 6 individual areas.

Easy to operate - 1 inlet, 6 outlets.

GARDENA - your advantages

1. Quality

GARDENA products are known for their extremely high quality and reliability. The entire production chain is subject to stringent quality guidelines.

2. Innovation/Technology

GARDENA develops products that render garden work as easy and efficient as possible. That's why continuous innovation and product development is undertaken using the latest technology.

3. Ergonomics/Comfort

GARDENA places high value on the ergonomics of their products. Products are designed for user comfort and makes garden work easier.

4. Service

Should you have any questions / queries relating to GARDENA products, please send your email to service@gardena.co.za and we will respond to your inquiry.
